

E-Commerce Product Page

🚀 Project Overview

This is a **simple e-commerce product catalog** built using **React, React Router, Context API, and Tailwind CSS**. Users can:

- ✓ View a list of products
- ✓ Add products to the cart
- ✓ Remove products from the cart
- ✓ View total price in the cart
- ✓ Navigate between pages

This project follows **React best practices**, such as:

- ✓ **Component-based architecture**
- ✓ **Global state management using Context API & useReducer**
- ✓ **React Router for navigation**
- ✓ **Tailwind CSS for styling**

📁 Project Structure

```
ecommerce-app/  
├── public/  
├── src/  
│   ├── components/           # Reusable UI components  
│   │   ├── Navbar.jsx  
│   │   ├── ProductCard.jsx  
│   │   └── Cart.jsx  
│   ├── pages/                # Page-level components  
│   │   ├── Home.jsx  
│   │   └── CartPage.jsx  
│   ├── context/              # Global state (CartContext)  
│   │   └── CartContext.jsx  
│   ├── App.js                # Main App component  
│   └── main.jsx               # ReactDOM entry point  
└── package.json              # Dependencies
```

◆ Key Features & Functionality

1. Displaying Products (Home Page)

The **Home Page** displays a list of products. Each product card shows:

- **Product name**
- **Price**
- **"Add to Cart" button**

Functionality:

- ✦ Clicking "Add to Cart" updates the global cart state via Context API.
-

2 Managing the Shopping Cart (Cart Page)

The **Cart Page** displays:

- **List of items added to the cart**
- **Total price calculation**
- **"Remove from Cart" button for each item**

Functionality:

- ✦ Clicking "Remove" updates the cart state and removes the item.
-

3 Global State Management (CartContext)

Instead of **prop drilling**, we use **Context API + useReducer** to manage the cart.

- ✓ **useContext** for global access
 - ✓ **useReducer** for cart operations (ADD_TO_CART, REMOVE_FROM_CART)
-

4 Navigation (React Router)

- ✓ **Navbar component** provides links to **Home** and **Cart Page**.
 - ✓ **React Router** is used for **client-side navigation**.
-

Tech Stack & Libraries Used

Technology	Purpose
React	UI Development
React Router	Page Navigation
Context API + useReducer	Global State Management
Tailwind CSS	Styling & Responsive Design
